

kikx

Brand guidelines

00

Contents

kikx vendors real, editable infrastructure files into your project. The brand is as plain as the tool: one mark, two colours, one accent, one typeface.

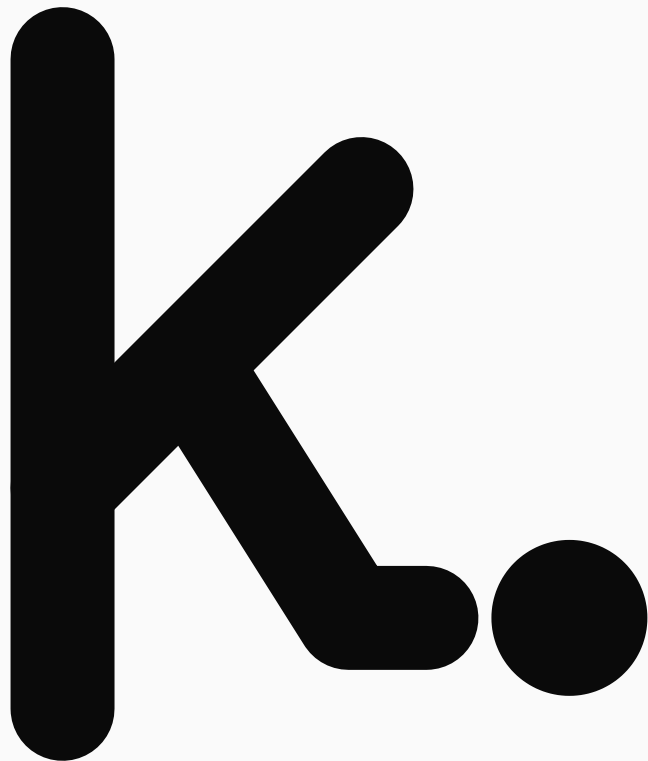

This guide sets the rules for using the kikx mark, wordmark, colour and type. Every measurement is taken from the master SVG files in `brand/images/svg/`. When the two disagree, the SVG files win.

Measurements on the mark use **units (u)**. The mark is drawn on a 128 × 128 u grid, so at 128 px one unit is one pixel. To convert, multiply by the rendered size divided by 128.

Master files	brand/images/svg/*.svg
Grid	128 × 128 u
Colours	Ink #0a0a0a · Paper #fafafa · Volt #c8f031
Typeface	Geist · Geist Mono

01 The mark

A lowercase **k** whose lower stroke bends into a kicking foot, with the ball just leaving it.

It reads as the first letter of the name and as the action the tool performs: kicking real files into your project. It is built from three strokes and one dot, all with round ends, so it stays clear from a 16 px browser tab to a 1280 px banner.

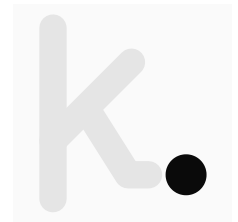

Stem
The upright of the k

Arm
Rises at 45°

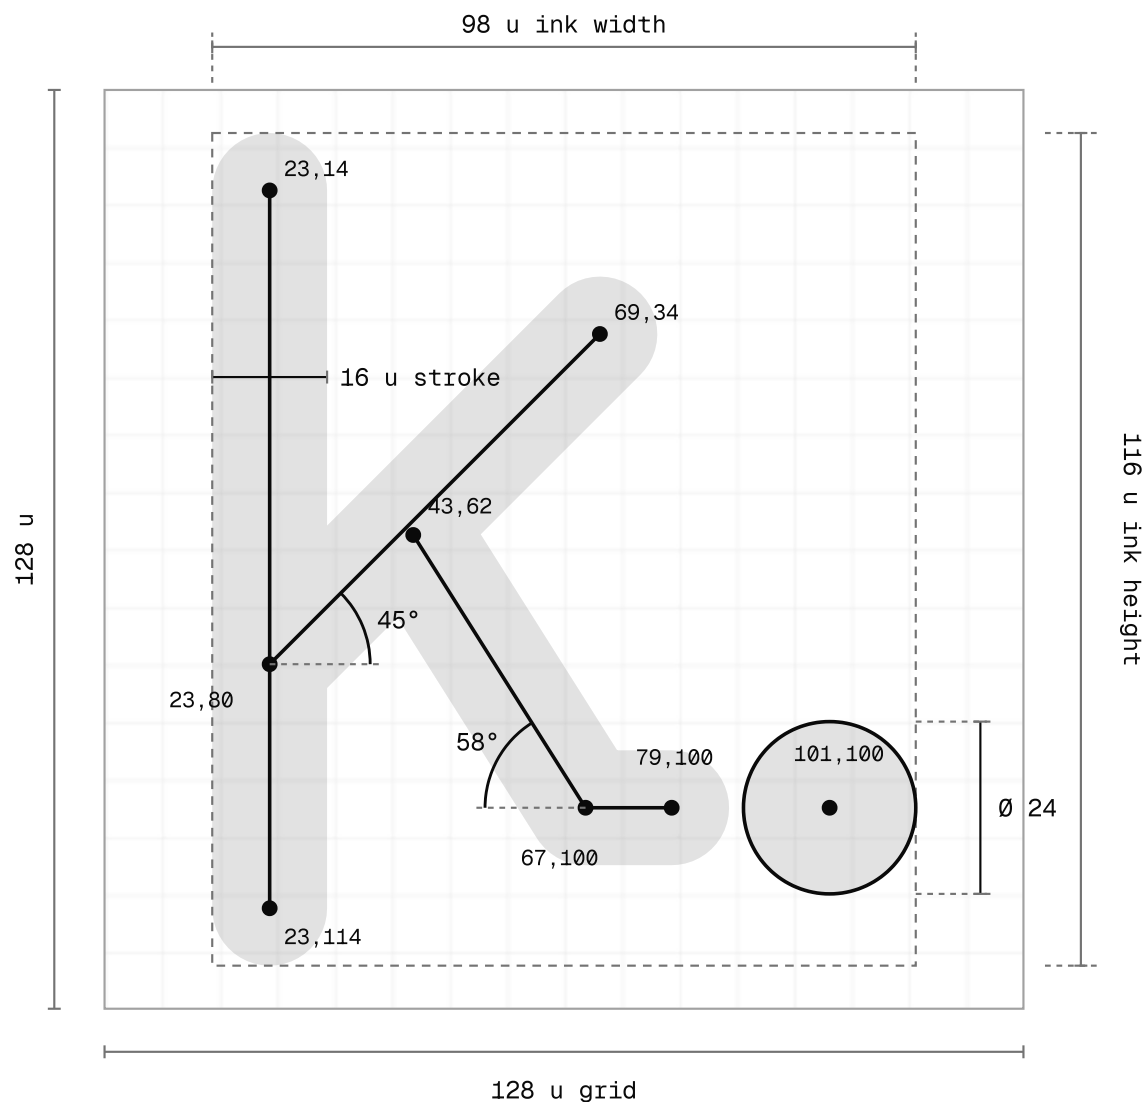

Leg and foot
Swings down, turns flat

Ball
Leaving the foot

02 Construction

The mark sits on a 128 u square. Three strokes of **16 u** with round caps and joins, plus a solid ball of **24 u** diameter. The ink is centred on the grid in both directions.

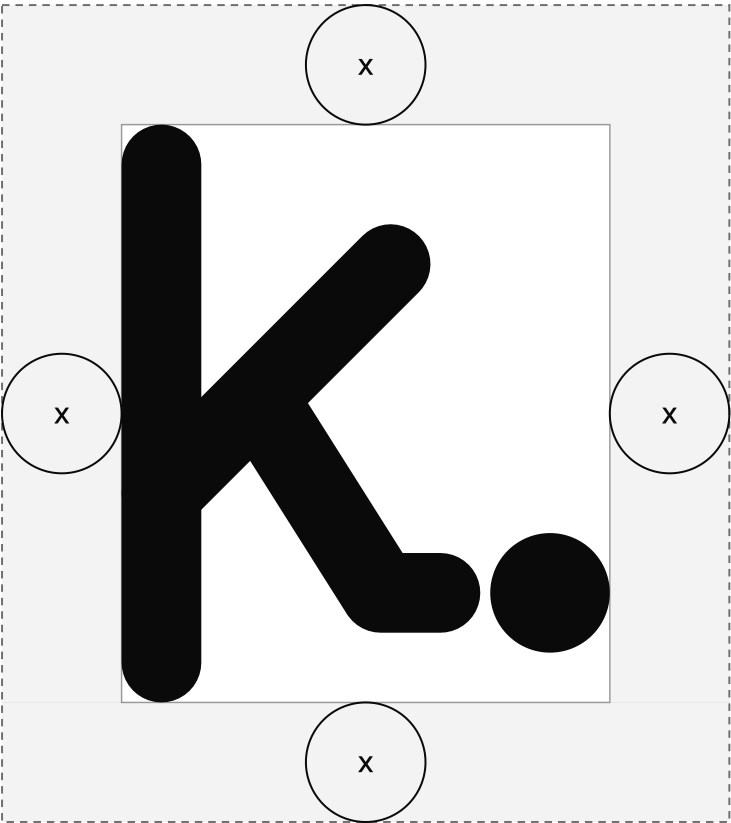

Grid	128 × 128 u
Stroke	16 u (12.5 % of grid)
Caps and joins	round
Stem	x 23, y 14 → 114 (100 u)
Arm	23,80 → 69,34 · 45°
Leg	43,62 → 67,100 · 58°
Foot	67,100 → 79,100 · 12 u
Ball	centre 101,100 · r 12 u
Foot to ball	2 u gap on the baseline
Ink box	98 × 116 u at 15,6
Side margins	15 u left and right
Top / bottom	6 u each

Coordinates are the stroke centrelines in the final 128 u space. The master SVGs draw the same shapes 7 u to the right and shift them back with `translate(-7 0)`.

03

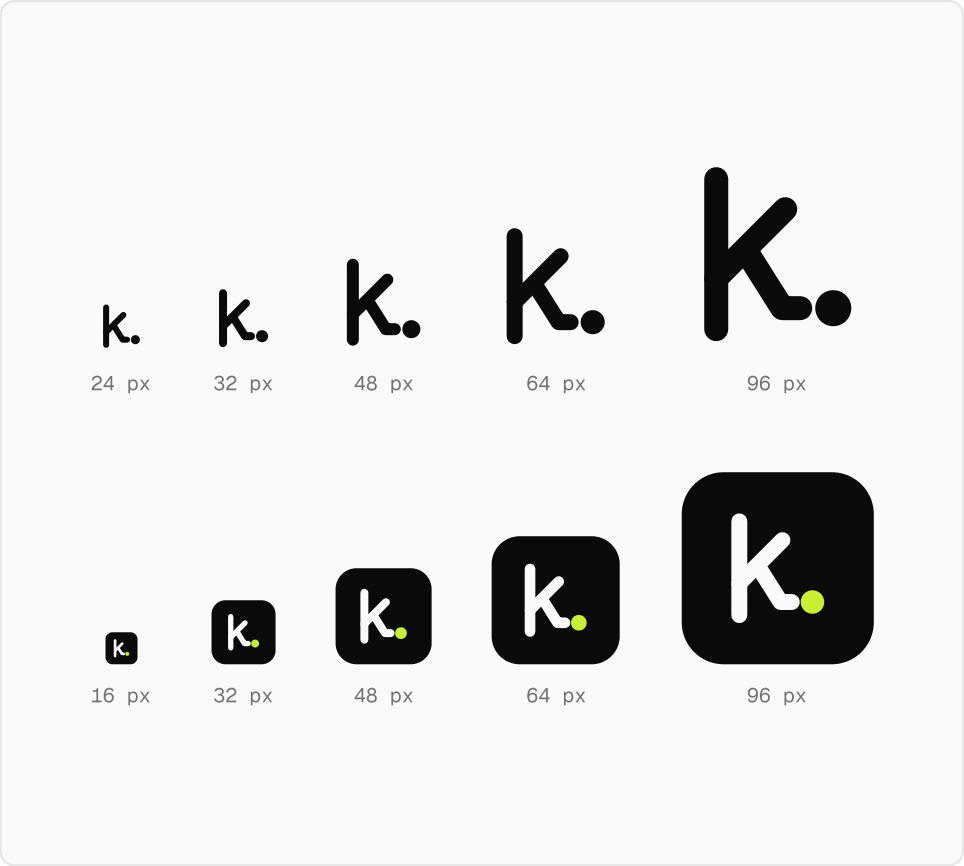

Clear space and minimum size

CLEAR SPACE

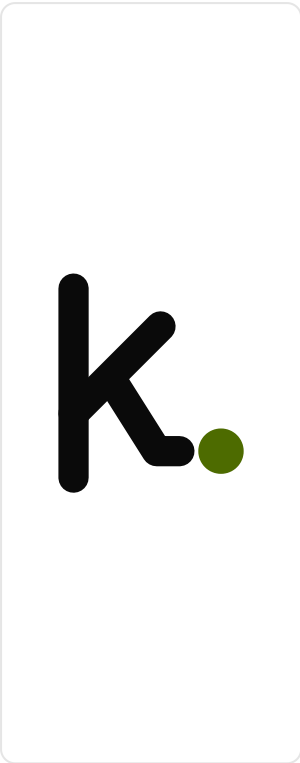

x = the diameter of the ball (24 u). Keep at least x of empty space on every side of the mark's ink. Nothing else, text, edges or other logos, enters this area. At 128 px, x is 24 px.

MINIMUM SIZE

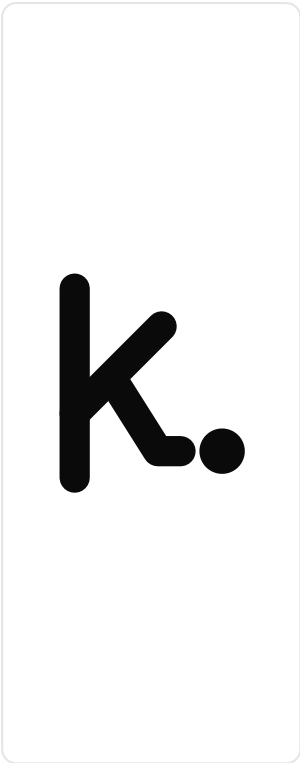

ASSET	SCREEN	PRINT
Mark on its own	24 px	8 mm tall
App icon	16 px	6 mm
Lockup (mark + wordmark)	20 px mark height	6 mm mark height

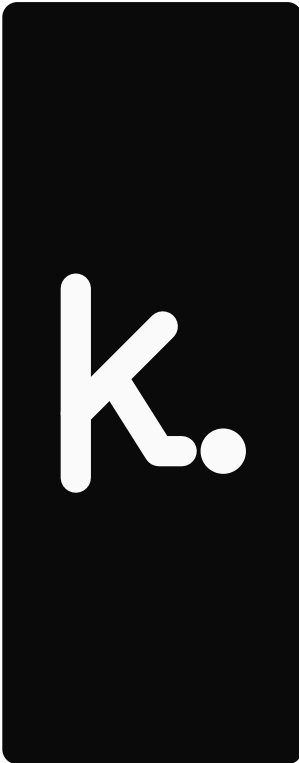

Colour versions

tile.

BACKGROUND	USE	CONTRAST
White #ffffff or Paper #fafafa	Accent mark; the black mark where only one colour prints	19.8 : 1 · ball 6.1 : 1
Ink #0a0a0a or darker than #404040	White mark, or the kicked mark	19.0 : 1 · ball 15.1 : 1
Photos, gradients, patterns, mid-greys	Do not place the bare mark. Use the app icon, or set the mark on a solid Ink or white panel.	–

05 App icon and favicon

APP ICON · 512 × 512 PX

- Canvas 512 × 512 px, Ink #0a0a0a
- Colour Paper #fafafa strokes · Volt #c8f031 ball
- Corner radius 112 px (21.875 %)
- Padding 96 px (18.75 %) each side
- Mark field 320 px, the 128 u grid × 2.5
- Stroke 17 u → 42.5 px · ball r 12.5 u → 31.25 px

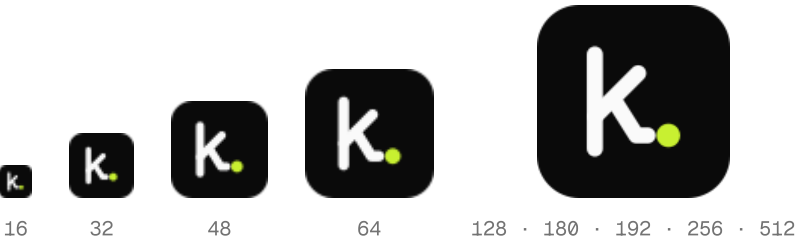

FAVICON · 128 U GRID

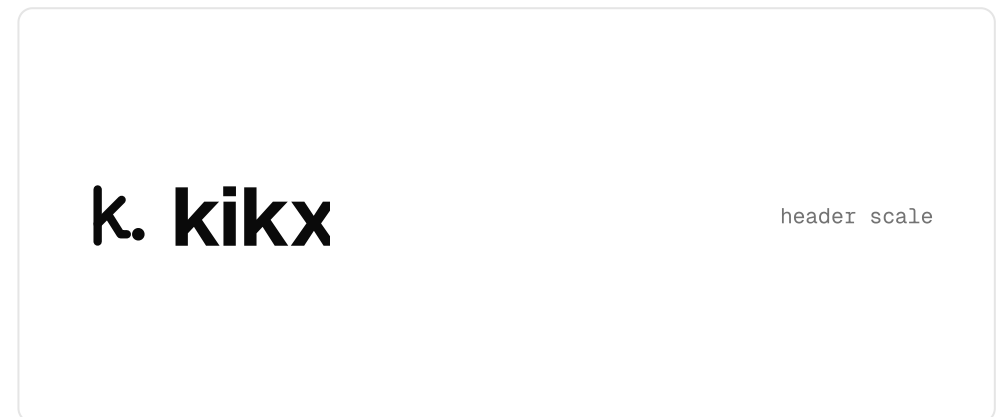

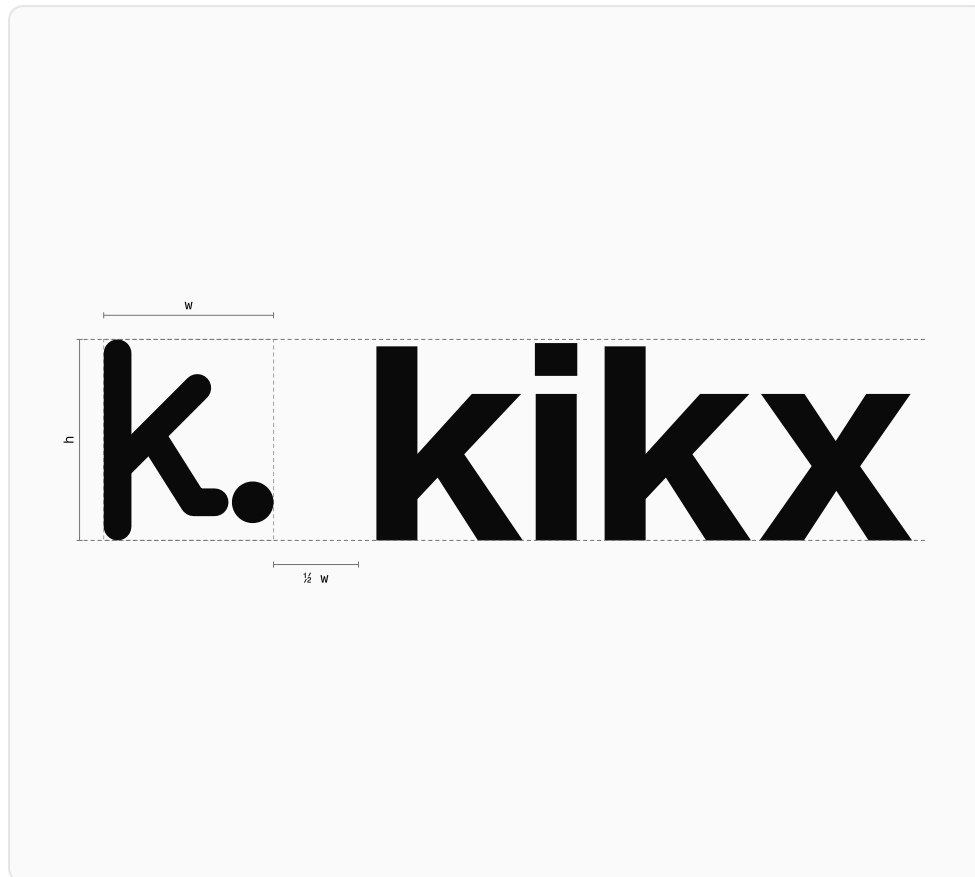

Small icons use heavier strokes so the mark holds its weight once the pixels run out. The shapes and positions never change, only the stroke and ball. On light, the ball takes Volt deep; on Ink, Volt.

VERSION	STROKE	BALL RADIUS	COLOUR
Mark	16 u	12 u	Ink, Volt deep ball; or all Ink or Paper
App icon	17 u	12.5 u	Paper strokes, Volt ball, on Ink
Favicon	18 u	13 u	Light: Ink, Volt deep ball · dark: Paper, Volt ball

RENDERED SIZES

06 Lockup with the wordmark

Height

The mark's ink is as tall as the wordmark's ascenders: the top of the k to the baseline. Call this **h**.

Gap

Leave half the mark's ink width ($\frac{1}{2} w$, about 0.42 h) between the mark and the wordmark. The ball's baseline sits on the text baseline.

Wordmark

Geist Bold, lowercase **kikx**, tracking -1.5 %. Never "Kikx" or "KIKX", never another typeface. The mark may stand alone; the wordmark does not replace it.

kikx is #0a0a0a & #fafafa, kicked with one accent: Volt #c8f031.

Ink and Paper carry the brand. Volt is the energy: the ball, one highlight, one main action. Primary buttons are a Volt fill with Ink text on light and dark alike. On light surfaces, the ball and text-level accents (links, labels, focus) take Volt deep, never plain Volt. Volt soft marks selected states, badges and chips. The greys and Line are working colours. No other hues or gradients.

PROPORTION

Roughly: white and Paper surfaces, Ink for text and marks, Volt at about 5 %, greys only for secondary text and dividers.

Neutral print values are black-only builds; a rich black (C40 M30 Y30 K100) can replace K96 on large solids. Volt CMYK is approximate, so proof it before printing.

Naming

- Always lowercase: **kikx**, even at the start of a sentence.
- Never "Kikx", "KIKX" or "KikX".
- Commands in Mono: `kikx add`.

Setting

- Headings tight (-2.5 %), body at 0.
- Left-aligned; lines of 60–80 characters.
- Sentence case for headings and buttons.

og-docs	1200 × 630	Tutorials, how-to guides, reference and explanation

12 Misuse

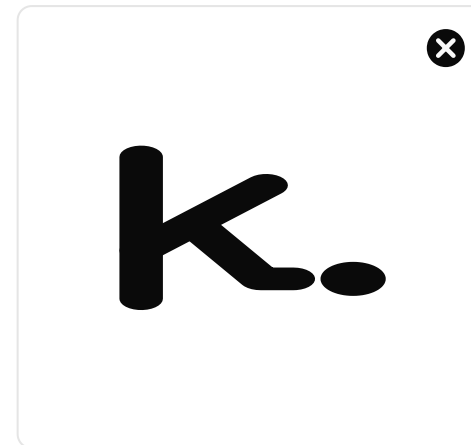

Do not recolour the strokes. Ink or Paper; only the ball takes Volt.

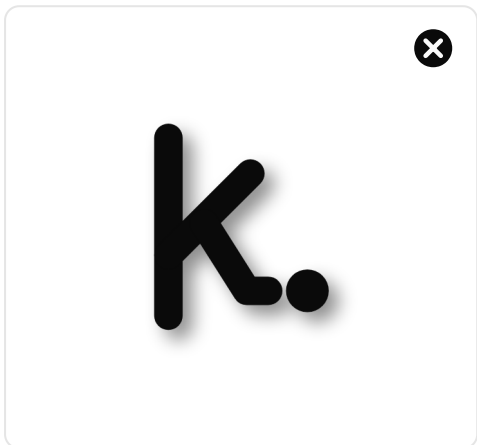

Do not outline or hollow out the strokes.

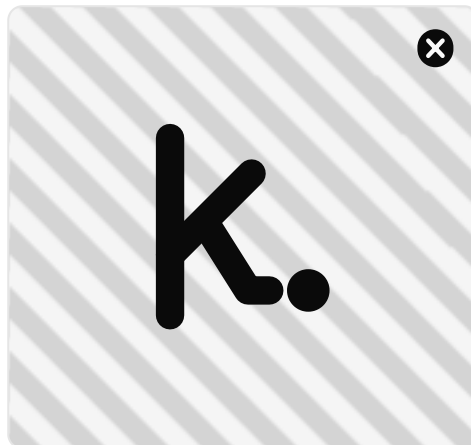

Do not rotate or flip the mark.

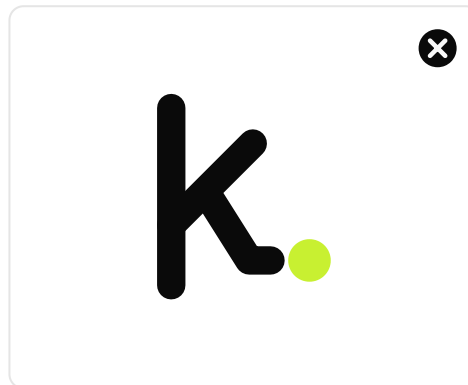

Do not stretch or squash. Scale evenly.

Do not add effects: shadows, glows, bevels.

Do not place on patterns or photos.

Do not use plain Volt on white for the ball or text (1.3 : 1). Use Volt deep. Volt stays fine as a button fill with Ink text.

Do not change the wordmark: no capitals, no other fonts.

Also avoid: greys as mark colours, Volt for body text, more than two Volt elements in one view, redrawing or re-spacing the strokes, adding a container other than the app icon's rounded square, animating parts of the mark apart, and crowding it inside the clear space.
